

Chris Cowherd has an extensive track record of success in developing, managing, and maintaining critical registrar and registry systems.

Chris began his career in the domain industry with eNom. As eNom's Chief Architect, Chris was charged with building and supervising teams responsible for protocol, network and security development. Chris subsequently served as Demand Media's Vice President of Research. With the advent of the new gTLD program, Chris moved his team to registry backend development in order to create the Donuts platform.

Chris's prior experience includes software development at Microsoft, where he worked on the company's most popular products including Excel, Internet Explorer and Windows 2000.

Chris holds four United States technology patents.
